

Applicant Portal — Multi-Step Application Form Spec

This document breaks the paper application form into a **7-step wizard** for the applicant-facing portal. Each step is a separate screen. The applicant moves forward with a "Next" button and can go back to edit previous steps.

General rules for every step:

- Show a progress indicator at the top (e.g. "Step 3 of 7 — Educational Background").
- Only truly essential fields are marked **Required**. Everything else is optional — do not block the applicant from proceeding if optional fields are empty.
- "Repeatable" sections start with **one empty row** and have a "+ **Add**" button to insert more rows. No fixed maximum.
- "Conditional" fields only appear after a specific answer is selected — keep them hidden/collapsed until triggered.

Notes for the Applicant Portal Build

- **Navigation:** Stepper at top should be clickable to jump back to already-completed steps. Forward navigation should be locked until the current step's required fields are filled.
- **Repeatable sections:** Use one consistent "+ Add [Item]" pattern across all repeatable groups (siblings, children, education levels' exams, employment, activities, trainings, emergency contacts, references) so the interaction feels the same everywhere.
- **Conditional fields:** Animate them open/closed rather than having them just appear — makes it clear to the applicant that the field is tied to their answer.
- **Draft saving:** Worth considering autosave/draft-per-step so applicants don't lose progress if they close the tab (not in the original paper form, but a good practice for a multi-step online version — flag this with your friend as a "nice to have").

Separate from this doc

- The **HR-side view** (viewing a submitted application inside the admin portal) is being handled separately — it will mirror these same 7 sections but as a read-only accordion, not a stepper.
- **PDF export** matching the original paper form's exact layout (per the reference images) will be scoped later.
- Actual code/implementation for the portal side is not part of this document — this is the field/logic spec only.
